

**CENTRE FOR
ENVIRONMENTAL SCIENCE AND
ENGINEERING**

Bulletin on Courses of Study, 2017-18

M.Tech. / M.Sc. – Ph.D. / Ph.D. Programmes

IIT Bombay

THE INTERDISCIPLINARY GROUP

The post-graduate programs and activities of the Centre for Environmental Science and Engineering (CESE) at IIT Bombay are designed to prepare the students for a better understanding of various aspects of Environmental Science and Engineering. The program is focused towards addressing the needs and challenges of major industrial sectors, governmental sectors, like MHRD, MoEF, MoES, MoWR, CSIR, DST, AICTE, and international agencies like WB, UNDP/UNEP, UNIDO, OECD and various funding institutions.

CESE has a dedicated group of eight regular faculty members and one emeritus professor with multi-disciplinary background and interests. The Centre offers M.Sc.-Ph.D., M.Tech. and Ph.D. programmes in Environmental Science and Engineering. All the programmes are interdisciplinary in nature and consist of course work followed by a research project. Credit requirement of coursework in Ph.D. programme varies depending upon the background of the candidate.

Major ongoing research deals with contemporary topics like (a) clean technologies and industrial pollution prevention, (b) integrated treatment and disposal of hazardous waste (c) bio-medical waste management (d) biodegradation of complex industrial wastewaters (fertilizer, food, paper, coke oven, dairy, distillery, petrochemicals) and wastewaters containing halogenated aromatics, nitro-aromatics and other mixed substrates (e) biodegradation of complex non-aqueous liquid pollutants (NAPLs e.g. oil and tar) (f) development and application of toxicity/mutagenicity tests for emissions and effluents (g) development of novel bioreactors (RBC, UASB) (h) air pollution monitoring, modeling and health risk analysis (i) aerosol and PAH emission factors, aerosol inventory, transport modeling and source apportionment (j) environmental impact assessment of developmental projects (k) in-situ and ex-situ remediation of contaminated groundwater and aquatic environments (l) environmental systems simulation and optimization, (m) risk, frequency and vulnerability assessment to natural/environmental hazards, (n) Analysis and mapping of hydroclimatic extremes, flood modeling, etc. Research projects are currently funded by agencies such as DBT, DST, MHRD, AICTE, MoWR, MoES and MNES.

The Centre is offering wide professional expertise and is actively pursuing sponsored research, consultancy and technical services. It has established strong links with leading industries, institutions and national/international agencies.

The Centre has well equipped laboratory for environmental monitoring and analysis, computing facilities. Some of the sophisticated instruments acquired in the recent past are Inductive Coupled Plasma (ICP), High Performance Liquid Chromatography (HPLC), Gas Chromatograph (GC), Ion Chromatograph (IC), Atomic Absorption Spectrophotometer (AAS), Particle Size Analysers and Indoor Air Quality Monitor, Luminometer, TOC, UV-Vis Spectrophotometer, Gel Imaging Systems, Respirable Dust Sampler, etc.

The Centre has ongoing research in the engineering fields of Aerosol and Air Quality; Water and Wastewater; Environmental Biotechnology; Clean Technology; Environmental Impact Assessment and Novel Technologies for Industrial/Hazardous Waste Management; Environmental Systems Modelling and Optimization; Risk, Frequency and Vulnerability Assessment and Mapping. CESE has established strong links and collaboration with leading industries, academic institutions and national/international agencies by conducting sponsored research projects and offering consultancy and technical services.

FACULTY

PROFESSOR

Sanjeev Chaudhari, Ph.D. (IIT Kanpur)
(Head of the Centre)

Shyam R. Asolekar, Ph.D. (Iowa)
Virendra Sethi, Ph.D. (Cincinnati)
Anil Kumar Dikshit, Ph.D. (Cornell)
Suparna Mukherji, Ph.D. (Michigan-Ann Arbor)

ASSOCIATE PROFESSOR

Anurag Garg, Ph.D. (IIT Roorkee)
Subhankar Karmakar, Ph.D. (IISc Bangalore)

ASSISTANT PROFESSOR

Munish K. Chandel, Ph.D. (IIT Delhi)
Harish C. Phuleria, Ph.D. (University of Southern California, LA)
Amritanshu Shrivastav, Ph.D. (IIT Kanpur)

2-Year M.Tech. Programme**CENTRE FOR ENVIRONMENTAL SCIENCE AND ENGINEERING****COURSE STRUCTURE**

Course Details

ES 200 ENVIRONMENTAL STUDIES (Institute Common UG Course) 3 0 0 3

Multidisciplinary nature of environmental studies; Natural Resources: Forest, Water, Mineral, Energy, Land; Sustainable development; Ecosystems; Biodiversity and its conservation.

Environmental Pollution: Air, Water, Soil, Solid and Hazardous Waste Management; Environment and human health; Environmental Legislation.

Global Issues: Climate change, global warming, acid rain, ozone layer depletion.

Social Issues and the Environment: Environmental ethics and economics; Resettlement and rehabilitation of people.

Maximum Registered Students

Should be distributed equally between two semesters. Maximum 350 students each semester

Prerequisites

None

ES 203 (Minor) WATER AND WASTEWATER ENGINEERING 3 0 0 6

Introduction to water and wastewater technology; water quality and effluent standards; Water demand forecasting; Determination of reservoir capacity; Water pollution; Environmental hydraulics; Water distribution systems; Wastewater collection; Water and Wastewater treatment: physical, chemical and biological unit operations; Sludge disposal.

Manual on Water Supply and Treatment (1991), 3rd Edition, Ministry of Urban Development, New Delhi.

Maximum Registered Students

40

Prerequisites (no prerequisite for minor courses as per the Institute rule)

None

ES 204 (Minor) ENVIRONMENTAL CHEMISTRY 3 0 0 6

Aquatic Chemistry : Chemical equilibria and kinetics fundamentals; Acids and bases; Titrations; Acidity; Alkalinity; Buffers and buffer intensity; Chemical equilibrium calculations; pC-pH diagram. Precipitation and dissolution; Water softening and water conditioning; Langelier index; Solubility diagram; Coexistence of phases in equilibrium; Complexation of metal ions and organic complexes in natural water. Oxidation and reduction reactions stoichiometry; Redox couples; pE-pH diagrams; Redox control in natural systems; Basic concepts of organic and colloid chemistry. Soil Chemistry : Weathering reactions; Structure and surface reactions of clays and oxides; Forces at soil-water interfaces. Atmospheric Chemistry : Chemical equilibria and kinetics; Photo-dissociation and free radical reactions; Chemistry of precipitation; Acid rain.

20

Prerequisites (no prerequisite for minor courses as per the Institute rule)

None

ES 205 ENVIRONMENTAL MICROBIOLOGY AND ECOLOGY**3 0 0 6**

(ES 633 is the M.Tech. component)

Structure of prokaryotic and eukaryotic cells; Types of microorganisms; Metabolic classification of microorganisms.

Microbial metabolism; Respiration and energy generation; Microbial growth; Enzyme kinetics and regulation; Bacterial genetics; Structure of DNA and RNA; Transcription and translation; Gene expression and regulation; Gene transfer and recombinant DNA technology.

Ecology; Ecosystem structure; Energy flow and material cycling in an ecosystem; Biogeochemical cycling of carbon, nitrogen, phosphorous and sulphur; Biodiversity and conservation of wild genetic resources.

Microbiological aspects of drinking water and water distribution systems.

Maximum Registered Students

15

Prerequisites

None

Only for M.Sc.-Ph.D. students of CESE

ES 207 INTRODUCTION TO FLUID MECHANICS (M.Sc. - Ph.D.)**3 0 0 6**

Definition and properties of fluids; fluid pressure and its measurement; hydrostatic force on plane, inclined and curved submerged surfaces; buoyancy and floatation; kinematics of fluid flow;; fluid dynamics: flow through orifices; weir and notches; flow through pipes; flow of compressible fluids; continuity, momentum and energy equations; flow through open channels; hydraulic machines.

Maximum Registered Students

15

Prerequisites

None

Only for M.Sc.-Ph.D. students of CESE

**ES 208 MASS TRANSFER PROCESS IN ENVIRONMENTAL SYSTEMS
(MSc-PhD) 3 0 0 6**

Environmental systems and processes: natural and engineered systems of environmental significance, character and scale, quantification, reactions, reactors, material balance relationship, initial and boundary conditions, mass balance based process models.

Macro transport and micro transport processes: advective and dispersive transport mass & momentum balance, Reynolds number, Prandtl hypothesis, dispersion coefficient and flux expressions, diffusive mass transfer, Ficks Law, diffusivity estimation, interphones mass transfer, boundary layers, mass transfer coefficients, film Model, penetration and surface renewal model, development of mass transfer correlations.

Energetics in homogeneous and heterogenous system: reaction concepts, equilibrium vs ateady-state, thermodynamic relationships and functions, reaction feasibility, fugacity and chemical potential , Henry's Law, Raoult's Law, phase exchange equilibria, absorption and adsorption processes, isotherm models, species distribution among phases in environmental eystems.

Rate concepts in homogenous system: mass law relationship, reaction order, rate data analysis and choice of rate expression, activation energy, complex reaction kinetics,

Reactor engineering in steady state homogenous systems: ideal reactions, CMBR, CMFR, PFR, PFDR, nonideal reactors, residence time distribution analysis.

Maximum Registered Students

15

Prerequisites

None

(This course will not be permitted as elective for students outside CESE)

ES 221 MATHEMATICS FOUNDATION (M.Sc.-Ph.D.)**3 0 0 6**

Review: Limit, Continuity, Differentiation and integration, Roll's theorem, Taylor's theorem, Fundamental theorem of integral calculus.

Introduction to Vectors: Vector fields, grad/divergence/curl, Gauss' and Stroke's theorem.

Linear Algebra: Mean value theorem and Taylor's series; Systems of linear equations – properties of determinants and matrices, solution of linear simultaneous equations; Linear independence, orthogonality and orthonormality; Systems of nonlinear equations – Bisection, Newton-Raphson, Secant methods, Eigenvalues and eigenvectors.

Ordinary differential equations: First order and Solution techniques, Ordinary linear differential equations of nth order, Systems of differential equations, Stability, Power series, Power series methods for solutions of ordinary differential equations.

Introduction to partial differential equations: Diffusion reaction problem, parabolic and elliptical equations.

Maximum Registered Students

15

Prerequisites

None

Only for M.Sc. – Ph.D. students of CESE

ES 254 ENVIRONMENTAL COMPUTATION LABORATORY (M.Sc.-Ph.D.) 0 0 3 3

Introduction to Computers and Computing, Introduction to a programming language, Applications of spreadsheet and management of software for solving environmental problem; Hands-on practice on statistical software/tools; hands-on practice on standard software in environmental science and engineering field.

Text/References

Various selected readings prescribed by the instructor.

Rudra Pratap, Getting Started with MATLAB 7: A Quick Introduction for Scientists and Engineers, Oxford University Press, 2005.

Maximum Registered Students

10

Prerequisites

None

Only for M.Sc. – Ph.D. students of CESE

ES 264 ENVIRONMENTAL SYSTEMS MODELLING**3 0 0 6**

(ES 664 is the M.Tech. component)

Definition; Classification; Examples of models for environmental systems. Introduction to air quality models; Meteorology; Atmospheric stability and turbulence; Gaussian plume model and modifications; Numerical models, Urban diffusion models, Calibration and sensitivity analysis; Applications of public domain models and software, Global radiation balance and climatic changes.

Transport and fate of pollutant in aquatic systems; Introduction to river, estuarine and lake hydrodynamics; Stratification and eutrophication of lakes; Dissolved oxygen model for streams; Temperature models.

Transport and fate of pollutants in soils and ground water; Utility of environmental models for forecasting.

Computational methods in environmental modelling.

Maximum Registered Students

10

Prerequisites

Strong background in mathematics is essential and programming is desirable. (with permission of the instructor)

Only for M.Sc. – Ph.D. students of CESE

ES 270 ENVIRONMENTAL STATISTICS**3 0 0 6**

(ES 670 is the M.Tech. component)

Overview of statistics and probability; Statistics in the context of environmental analysis; Probability concepts and probability distributions; conditional probability and Bayes' theorem

Fundamentals of data analysis; Measurement uncertainty: Precision and accuracy; Reproducibility/repeatability; Types of Error, Normal error curve; Error propagation; Quality assurance and quality control; Confidence intervals. Hypothesis testing for equality of mean and standard deviation: t-test, chi-square test and F-test; Errors in hypothesis testing.

Experiment design and analysis of variance; ANOVA concepts; Completely randomized design; Randomized block design; Two-way factorial design; Variance component analysis; Factorial and fractional factorial design; Significance of interaction between factors.

Regression versus correlation; Autocorrelation in data; Linear versus non-linear regression models; Linear least-squares regression; Precision of parameter estimates, coefficient of determination: inherent limitations; Non-parametric statistics; Exercises using the statistical package SYSTAT.

Maximum Registered Students

15

Prerequisites

None

(This course should not be permitted as elective for students outside CESE)

ES 302 ENVIRONMENTAL BIOTECHNOLOGY**3 0 0 6**

Nature of biological processes and their application to industries such as fermentation technology; enzyme technology and their environmental applications: Bioprocesses for cleaner production, sustainable development and economic benefits: biobleaching in pulp and paper industries; bioleaching (biomining) of ores for recovery of precious metals; cleaner biotechnologies in oil agro industries
Biological fuel generation: biohydrogen, biomethanation and alcohol production
Biotechnology for enhancing agricultural productivity: bioinsecticides- structure, function and mode of action
Cleaner production activities in Asia: case studies on demonstration projects
Pollution control biotechnology: application of microorganisms, enzymes and plants (phytoremediation) for treatment of domestic and industrial wastewater and soil; immobilized microorganisms in waste treatment; use of immobilized cells and enzymes as biosensors;
Genetic engineering: Introduction to recombinant DNA technology, safety, social, moral and ethical considerations; applications of recombinant technology for enhanced biodegradation and engineer organism with novel catabolic capabilities; detection of pathogens and parasites in wastewater and environmental samples using nucleic acid probes and polymerase chain reaction (PCR).
Public perception of biotechnology, protection of biotechnological inventions, looking to the future of biotechnology.

15

Prerequisites

None
(Only for the M.Sc. - Ph.D. students of CESE)

**ES 303 (Minor) MUNICIPAL SOLID AND BIOMEDICAL
WASTE MANAGEMENT****3 0 0 6**

Solid waste management: Sources, Composition and Properties of Municipal Solid Waste, Engineering principles; Generation of solid waste; Onsite handling, storage and processing including segregation; Collection of solid waste; Transfer and transport; Processing technique and equipment; Recovery of resources; Conversion products and energy; Composting; Recycling; Incineration and pyrolysis; Disposal of solid waste including sanitary landfill, planning, siting, design, closure and post-closure monitoring; Regional/Integrated solid waste management related issues. Biomedical waste : Regulatory framework, categorization; generation, collection, transport, treatment and disposal.

Prerequisites (no prerequisite for minor courses as per the Institute rule)

None

ES 305 AIR POLLUTION SCIENCE AND ENGINEERING**3 0 0 6**

(ES 635 is the M.Tech. component)

Air Pollutants and their Effects : The air pollution system; Gases and particulate; Atmospheric sources, sinks, transport; Effects of health and environment; Criterial pollutants, ambient and source standards.

Aerosols : Characterisation of aerosols, size distributions, measurement methods; Transport behaviour: diffusion, sedimentation, inertial, electrical and thermal; Aerosol Dynamics: nucleation, condensation and coagulation, Radiation properties – visibility, climate effects; principles of particulate control systems.

Gaseous Pollutants : Vapour-liquid and vapour-solid equilibria; Diffusion and Interfacial mass-transfer; Control systems.

Air quality management : dispersion modeling, source apportionment methods.

Maximum Registered Students

15

Prerequisites

This course is not permitted as elective for students outside CESE. Only M.Sc. - Ph.D. students of CESE are allowed to register.

ES 306 (Minor) ENVIRONMENTAL SYSTEMS MODELLING 3 0 0 6

Definition; Classification; Examples of models for environmental systems. Introduction to air quality models; Meteorology; Atmospheric stability and turbulence; Gaussian plume model and modifications; Numerical models, Urban diffusion models, Calibration and sensitivity analysis; Applications of public domain models and software, Global radiation balance and climatic changes. Transport and fate of pollutant in aquatic systems; Introduction to river, estuarine and lake hydrodynamics; Stratification and eutrophication of lakes; Dissolved oxygen model for streams; Temperature models. Transport and fate of pollutants in soil and ground water; Utility of environmental models for forecasting. Computational methods in environmental modelling.

Maximum Registered Students

15

Prerequisites

None

(Only for the M.Sc. - Ph.D. students of CESE)

ES 401 (Minor) ENVIRONMENTAL MANAGEMENT 3 0 0 6

Environmental regulations and policies; Environmental protection laws and acts; Corporate and international charters and protocols; Environment Risk assessment; Industrial ecology, Pollution prevention and Waste minimization; Sustainable development; Life cycle assessment; Environmental auditing; Eco-labelling of products; Performance indicators. Environmental management systems particularly IS 14000 series. Successful Case Studies.

Maximum Registered Students

10

Prerequisites (no prerequisite for minor courses as per the Institute rule)

None

**ES 444 (Minor) INDUSTRIAL POLLUTION PREVENTION AND
CLEAN TECHNOLOGIES****3 0 0 6**

Principles and techniques for industrial pollution prevention and waste minimization; Nature and characteristics of industrial wastes; Prevention versus control of industrial pollution; Source reduction tools and techniques: raw material substitution, toxic use reduction and elimination, process modification and procedural changes; Recycling and reuse; Opportunities and barriers to cleaner technologies; Pollution prevention economics. Waste audits, emission inventories and waste management hierarchy for process industries; Material balance approach; Material and process mapping approach; Emission sources; Estimation of fugitive emissions; Environmental impact of VOCs; Energy and resource (material and water) audits for efficient usage and conservation. Unit operations in separation technology; Pollution prevention for unit operations: Boilers and Heat Exchangers; Storage tanks; Distillation columns; Application of separation technologies for pollution prevention; Process optimization for cleaner industrial processes: Flowsheet analysis—qualitative and quantitative approaches using mass exchange networks; Thermodynamic constraints to waste minimization; Holistic and critical technology assessment; Environmental performance indicators; Concept of industrial ecology and symbiosis of eco-parks. Case studies on industrial applications of cleaner technologies in chemical, metallurgical, pulp and paper, textile, electroplating, leather, dairy, cement and other industries.

Ltd., New Delhi (the Indian association of Cambridge University Press, UK), 2005.

Maximum Registered Students

10

Prerequisites (no prerequisite for minor courses as per the Institute rule)

None

Remarks: ES 444 and ES 458 is offered in alternate year

ES 451 ENVIRONMENTAL FIELD STUDIES (M.Sc.-Ph.D.) 0 0 4 4

Field experiments to assess the status of various components of environment in a selected area, Sampling and analysis of environmental parameters, Assessment of sources of pollution.

Visit to industrial units or treatment schemes to understand and undertake assessment to relate basic principles, Preparation of field study report.

Air Quality: Sampling of particulates, Size distribution of particles, Sampling of gaseous pollutants SO₂, NO_x, CO, NH₃ and CO₂; Measurement of air pollution meteorological parameters wind, turbulence, T, RH, solar radiation and rain.

Water Quality: Measurement of parameters to determine the status of water bodies and drinking water quality; pH, turbidity, total hardness, DO, BOD, COD, NH₄⁺-N, phenol, oil and grease, standard plate count measurements.

Soil/sediment Quality: Total C content, organic matter, inorganic phosphate.

Ecology: Identification of organisms into genus and species; Measurement and calculation of biodiversity indices based on plants and animals; Observations of interactions (interdependence) among organisms; Net and gross primary productivity, community respiration rate; Field Trips.

Socio-economic Survey: Population distribution, health status, perception of environment.

15

Prerequisites

None

(Only for M.Sc.-Ph.D. students of CESE)

ES 458 (Minor) ENVIRONMENTAL CHANGE AND SUSTAINABLE DEVELOPMENT**3 0 0 6**

(previously the course number was ES 658)

Issues of sustainability : food, materials and energy resources, demands, policies, ethics; Paradigms of agricultural/industrial age, population, limits to growth; Current debates on the issues of sustainability; Relationships of ecological, economic and social systems; Engineering tools for assessment and design for environment and sustainability; Relevance of traditional paradigms for rural India.

Maximum Registered Students

10

Prerequisites (no prerequisite for minor courses as per the Institute rule)

None

Remarks: ES 444 and ES 458 will be offered in alternate year

ES 505 HEALTH SAFETY AND ENVIRONMENT (M.Sc. – Ph.D.) 3 0 0 6

Regulations for Environment, Health and Safety : Factories Act and Rules, Environmental Pollution Act, Oil Industry Safety Directorate (OISD), Indian Electricity Acts and Rules, Mines Acts and Rules , Workmen Compensation Act, OSHA Standards, IS & BS Standards, API standards

Occupational Health and Hygiene: Physical Hazards: Noise and vibration, Instrumentation, Surveying procedure, Health effects, Control measures (stress, exposure and radiation effects).

Chemical Hazards: Recognition of hazards, TLV for air, gas and chemical contaminants. Demonstration of equipment for the assessment of physical and chemical hazards.

Occupational Health: Concept and spectrum of health, industrial toxicology, toxicity

Safety Management

Safety performance : As per Indian and International standards

Hazard analysis: Cost effectiveness in hazard elimination – logical analysis – HAZOP Probabilistic reliability considerations, Estimating probability in time, mathematical calculation of probability, reliability determination.

Safety management techniques: Safety inspection – safety action, safety survey disaster control.

Environmental Pollution Control

Air pollution: Classification and properties of air pollutants, sources, control, dispersion of air pollutants.

Water pollution: Classification – effect on receiving bodies, chemical, physical and biological treatment method.

Solid Waste Management: Method of collection, disposal, land filling.

Supplementary Reading Materials (Selected Book Chapters and Papers)

Maximum Registered Students

60

Prerequisites

None

ES 616 ENERGY CONVERSION AND ENVIRONMENT**3 0 0 6**

Interlinkages of energy and environment.

Principles of energy conversion methods: thermal, nuclear, hydro, solar.

An introduction to fuels, combustion fundamentals, thermodynamics, kinetics and properties of combustion products; combustion principles for gases, liquids and solids.

Formation of pollutants, measurements and control.

Automobile engines, operation and design, emissions. power production and emissions from waste incineration.

Energy policies, economics related to energy along with cost factor, the renewable energy sources and conversion processes and sustainable energy.

Energy externalities, Energy and climate change global issues.

Alternative energy sources, economics, sustainability.

20

Prerequisites

None

ES 624 HAZARDOUS WASTE MANAGEMENT**3 0 0 6**

Hazardous Waste Fundamentals : Definition; Landmark episodes; Classification; Generation.

Regulatory process : Hazardous Waste (Management and Handling) Rules and Amendments, Guidelines for HWM from MoEF, New Delhi, Regulatory framework in the USA and EU, Basal Convention and other international statutes.

Process : Physicochemical properties; Energy and mass balances; Fate and transport of contaminants; Toxicology

Current Management Practices : Environmental audit; Pollution prevention; Facility development and operations.

Treatment and Disposal Methods : Physicochemical processes; Biological processes; Stabilization and solidification; Thermal methods; Land disposal.

Remediation of Contaminated Sites : Quantitative risk assessment; Site and subsurface characterization; Containment, Remedial alternatives.

Maximum Registered Students

30

Prerequisites

For all UG and DD students: ES 200 and only for students from Civil, Chemical, Metallurgy and Energy Department.

ES 631 ENVIRONMENTAL CHEMISTRY**3 0 0 6**

Aquatic Chemistry : Chemical equilibria and kinetics fundamentals; Acids and bases; Titrations; Acidity; Alkalinity; Buffers and buffer intensity; Chemical equilibrium calculations; pC-pH diagram.

Precipitation and dissolution; Water softening and water conditioning; Langelier index; Solubility diagram; Coexistence of phases in equilibrium; Complexation of metal ions and organic complexes in natural water.

Oxidation and reduction reactions stoichiometry; Redox couples; pE-pH diagrams; Redox control in natural systems; Basic concepts of organic and colloid chemistry.

Soil Chemistry : Weathering reactions; Structure and surface reactions of clays and oxides; Forces at soil-water interfaces.

Atmospheric Chemistry : Chemical equilibria and kinetics; Photo-dissociation and free radical reactions; Chemistry of precipitation; Acid rain.

Maximum Registered Students

45

Prerequisites

None

ES 633 ENVIRONMENTAL MICROBIOLOGY AND ECOLOGY**3 0 0 6**

(ES 205 is the M.Sc.-Ph.D. component)

Structure of prokaryotic and eukaryotic cells; Types of microorganisms; Metabolic classification of microorganisms.

Microbial metabolism; Respiration and energy generation; Microbial growth; Enzyme kinetics and regulation; Bacterial genetics; Structure of DNA and RNA; Transcription and translation; Gene expression and regulation; Gene transfer and recombinant DNA technology.

Ecology; Ecosystem structure; Energy flow and material cycling in an ecosystem; Biogeochemical cycling of carbon, nitrogen, phosphorous and sulphur; Biodiversity and conservation of wild genetic resources.

Microbiological aspects of drinking water and water distribution systems.

Maximum Registered Students

30

Prerequisites

This course is not permitted as elective for students outside CESE. ES 633 is offered for MTech and PhD students.

ES 635 AIR POLLUTION SCIENCE AND ENGINEERING**3 0 0 6**

(ES 305 is M.Sc.-Ph.D. component)

Air Pollutants and their Effects : The air pollution system; Gases and particulate; Atmospheric sources, sinks, transport; Effects of health and environment; Criterial pollutants, ambient and source standards.

Aerosols : Characterisation of aerosols, size distributions, measurement methods; Transport behaviour: diffusion, sedimentation, inertial, electrical and thermal; Aerosol Dynamics: nucleation, condensation and coagulation, Radiation properties – visibility, climate effects; principles of particulate control systems.

Gaseous Pollutants : Vapour-liquid and vapour-solid equilibria; Diffusion and Interfacial mass-transfer; Control systems.

Air quality management : dispersion modeling, source apportionment methods.

Prerequisites

This course is not permitted as elective for students outside CESE.

ES 637 MUNICIPAL WATER AND WASTEWATER SYSTEMS**3 0 0 6**

Introduction to urban and metropolitan regional planning; Water quality and effluent standards; Issues related to water supply and disposal of wastewater; Water demand forecasting and management.

Environmental hydraulics : Flow in pipes; Multiport diffuser outfalls; Flow in open channels; Pumps-system-head curve and pump head curve; Hydraulic profile computations of water and wastewater treatment plant.

Water treatment and distribution systems; Network design; Municipal wastewater collection; Computer packages for the design of water distribution and wastewater collection system.

45

Prerequisites

None

Remarks: This course should not be permitted as elective for students outside CESE

ES 639 PHYSICO-CHEMICAL TREATMENT TECHNOLOGIES**3 0 0 6**

Overview of mass transfer and reactor concepts; Mass transport mechanisms; Ideal reactors, non-idealities, Mass balance in various reactor configurations.

Particle separation processes; Coagulation and flocculation processes, Particle surface charge, surface potential and stability of colloidal dispersions; Sedimentation and flotation processes, Gravity thickeners, clarifiers and flotation systems; Filtration and Ultrafiltration Processes, Modeling approaches for rapid sand filters.

Solute separation processes; Gas transfer processes, Diffused and surface Aeration and Air stripping of volatile contaminants in packed tower; Adsorption and ion exchange processes, sorption isotherm models and rates considerations, Sorption in completely mixed and packed bed reactors; Precipitation processes; Reverse osmosis and electrodialysis.

Species transformation processes; Chemical oxidation / reduction processes, disinfection using chlorine and UV.

30

Prerequisites

For all UG and DD students: ES 200 and only for students from Civil, Chemical, Metallurgy and Energy Department.

**ES 644 INDUSTRIAL POLLUTION PREVENTION AND
CLEAN TECHNOLOGIES****3 0 0 6**

Principles and techniques for industrial pollution prevention and waste minimization; Nature and characteristics of industrial wastes; Prevention versus control of industrial pollution; Source reduction tools and techniques: raw material substitution, toxic use reduction and elimination, process modification and procedural changes; Recycling and reuse; Opportunities and barriers to cleaner technologies; Pollution prevention economics.

Waste audits, emission inventories and waste management hierarchy for process industries; Material balance approach; Material and process mapping approach; Emission sources; Estimation of fugitive emissions; Environmental impact of VOCs; Energy and resource (material and water) audits for efficient usage and conservation.

Unit operations in separation technology; Pollution prevention for unit operations: Boilers and Heat Exchangers; Storage tanks; Distillation columns; Application of separation technologies for pollution prevention; Process optimization for cleaner industrial processes: Flowsheet analysis—qualitative and quantitative approaches using mass exchange networks; Thermodynamic constraints to waste minimization; Holistic and critical technology assessment; Environmental performance indicators; Concept of industrial ecology and symbiosis of eco-parks.

Case studies on industrial applications of cleaner technologies in chemical, metallurgical, pulp and paper, textile, electroplating, leather, dairy, cement and other industries.

Maximum Registered Students

30

Prerequisites

Only for the M. Tech students of CESE. Not permitted for students outside CESE because this is a lab course and we cannot handle more number of students.

ES 653 ENVIRONMENTAL IMPACT ASSESSMENT**3 0 0 6**

Evolution of EIA; EIA at project; Regional and policy levels; Strategic EIA; EIA process;

Screening and scoping criteria; Rapid and comprehensive EIA.

Legislative and environmental clearance procedures in India and other countries, Siting criteria; CRZ; Public participation; Resettlement and rehabilitation.

Practical applications of EIA; EIA methodologies; Baseline data collection; Prediction and assessment of impacts on physical, biological and socio-economic environment; Environmental management plan; Post project monitoring, EIA report and EIS; Review process.

Case studies on project, regional and sectoral EIA.

Specialised areas like environmental health impact assessment; Environmental risk analysis; Economic valuation methods; Cost-benefit analysis; Expert system and GIS applications; Uncertainties.

Prerequisites

None

**ES 654 GROUNDWATER FLOW AND CONTAMINANT
TRANSPORT THROUGH POROUS MEDIA****3 0 0 6**

Water movement in the subsurface; Groundwater and the hydrologic cycle; The groundwater environment; Types of aquifers; Sources of contamination; Saturated flow: continuity equation; Darcy's Law; Equation of flow; Analytical solutions and numerical modeling; Unsaturated flow; Ground water sampling methods and analyses.

Transport of contaminants; Transport equation; Dispersion and diffusion in porous media; Reaction terms; Analytical solutions; Soil chemistry; Groundwater quality; Common soil minerals and components; Forces at soil-water interfaces; Adsorption and surface complexation models; Interaction of non-polar compounds with soils; Soil chemical kinetics; Modelling Groundwater Pollution; Coupling of contaminant-soil interactions with transport; Reaction and transport of trace metals, ligands and nonpolar organic solutes.

Freeze, R.A., and Cherry, J.A., Groundwater, Prentice Hall, Englewood Cliffs, New Jersey, 1979.

Maximum Registered Students

15

Prerequisites

Knowledge of Mathematics fundamentals is essential. Programming knowledge desirable (with permission of instructor).

ES 655 ENVIRONMENTAL MANAGEMENT**3 0 0 6**

Environmental regulations and policies; Environmental protection laws and acts; Corporate and international charters and protocols; Environment Risk assessment; Industrial ecology, Pollution prevention and Waste minimization; Sustainable development; Life cycle assessment; Environmental auditing; Eco-labelling of products; Performance indicators.

Environmental management systems particularly IS 14000 series.

Asolekar, S. R. and Gopichandran, R. Preventive Environmental Management - An Indian Perspective Foundation Books Pvt. Ltd., New Delhi (the Indian association of Cambridge University Press, UK), 2005.

Maximum Registered Students

30

Prerequisites

M.Sc.-Ph.D., M. Tech. and Ph.D. students from CESE ONLY. Should not be included on 'outside department' electives.

ES 656 BIOREMEDIATION – PRINCIPLES AND APPLICATIONS**3 0 0 6**

Current bioremediation practice and applications; Microbial systems of bioremediation; Factors influencing bioremediation (environmental factors, physical factors and chemical factors); Genetic responses of microorganisms to the presence of pollutants (plasmid coded inducible degradative enzymes); Application of genetically engineered microorganisms for hazardous waste management; Microbial transformation reactions (aerobic and anaerobic biotransformations); Microbial detoxification of specialty chemicals (insecticides, herbicides, fungicides, polychlorinated biphenyls, heavy metals); Bioremediation systems and processes (solid, liquid and slurry phase bioremediation); Microbial cleaning of gases (biofiltration and bioscrubbing); In situ bioremediation; Laboratory scale biotreatability studies for bioremediation; Management of bioremediation project.

Maximum Registered Students

20

Prerequisites

ES 633 Environmental Microbiology and Ecology

(M.Sc.-Ph.D. and M.Tech. components)

Issues of sustainability : food, materials and energy resources, demands, policies, ethics; Paradigms of agricultural/industrial age, population, limits to growth; Current debates on the issues of sustainability; Relationships of ecological, economic and social systems; Engineering tools for assessment and design for environment and sustainability; Relevance of traditional paradigms for rural India.

Maximum Registered Students

30

Prerequisites

For all UG and DD students: ES 200 and only for students from Civil, Chemical, Mechanical, Metallurgy and Energy Department.

(ES 264 is the MSc.-Ph.D. component)

Definition; Classification; Examples of models for environmental systems.
Introduction to air quality models; Meteorology; Atmospheric stability and turbulence; Gaussian plume model and modifications; Numerical models, Urban diffusion models, Calibration and sensitivity analysis; Applications of public domain models and software, Global radiation balance and climatic changes.
Transport and fate of pollutant in aquatic systems; Introduction to river, estuarine and lake hydrodynamics; Stratification and eutrophication of lakes; Dissolved oxygen model for streams; Temperature models.
Transport and fate of pollutants in soils and ground water; Utility of environmental models for forecasting.
Computational methods in environmental modelling.

Tchobanoglous, G., Schroeder, E.D., Water Quality, Addison – Wesley Publishing Company, Reading, Massachusetts, 1987.

Maximum Registered Students

30

Prerequisites

Strong background in mathematics is essential and programming is desirable.
(with permission of the instructor)

Classification of biochemical operations; Stoichiometry and kinetics of biochemical operations; Modelling of suspended growth systems (basic model for CSTRs; Extensions of the basic model; Methods of biomass recycle and retainment; Techniques for evaluation of kinetic and stoichiometric parameters; Multiple microbial activities in reactors); Design and evaluation of suspended growth processes (guiding principles; Iterative nature of process design and evaluation; Basic decisions during design; Levels of design; Factors to be considered during design); Biological nutrient removal (carbon, nitrogen and phosphorous removal); Anaerobic treatment (process options, components of anaerobic reactions that influence process design); Attached growth reactors (process description and applications); Biodegradation of xenobiotic organic chemicals.

Gray, N. F., Biology of Wastewater Treatment, Oxford University Press, London, 1989.

Maximum Registered Students

38

Prerequisites

ES 205/633 (only students of CESE)

Introduction to Computers and Computing, Introduction to a programming language, Applications of spreadsheet and management of software for solving environmental problem; Hands-on practice on statistical software/tools; hands-on practice on standard software in environmental science and engineering field.

Text/References

Various selected readings prescribed by the instructor.
Rudra Pratap, Getting Started with MATLAB 7: A Quick Introduction for Scientists and Engineers, Oxford University Press, 2005.

Maximum Registered Students

27

Prerequisites

None

Remarks: Only for CESE M.Tech. students

(ES 270 is the M.Sc.-Ph.D. component)

Overview of statistics and probability; Statistics in the context of environmental analysis; Probability concepts and probability distributions; conditional probability and Bayes' theorem

Fundamentals of data analysis; Measurement uncertainty: Precision and accuracy; Reproducibility/repeatability; Types of Error, Normal error curve; Error propagation; Quality assurance and quality control; Confidence intervals. Hypothesis testing for equality of mean and standard deviation: t-test, chi-square test and F-test; Errors in hypothesis testing.

Experiment design and analysis of variance; ANOVA concepts; Completely randomized design; Randomized block design; Two-way factorial design; Variance component analysis; Factorial and fractional factorial design; Significance of interaction between factors.

Regression versus correlation; Autocorrelation in data; Linear versus non-linear regression models; Linear least-squares regression; Precision of parameter estimates, coefficient of determination: inherent limitations; Non-parametric statistics; Exercises using the statistical package SYSTAT.

Maximum Registered Students

20

Prerequisites

None

Remarks: This course should not be permitted as elective for students outside CESE)

Industrial sources of air pollution; Behaviour of pollutants in atmosphere; Emission factors, regulations, control strategies and policies; Choosing appropriate APC technology.

Particulate Pollutant Control : Settling chambers – laminar and turbulent flow; Filtration – interception; Impaction; Convective diffusion; Collection of particles by cylindrical fibres and granular beds; Electrostatic precipitation – field and diffusion charging; Electrical migration velocity; Cyclones – laminar and turbulent flow; Wet collectors; Design and drawing of various particle control devices.

Gaseous Pollutant Control : Gas absorption in tray and packed towers; Stage efficiency; Liquid/gas rates; Equilibrium number of stages/packed height; Absorption with/without chemical reaction; Adsorption in fixed beds; Breakthrough; Wet scrubbers; Condensation and combustion; Design and drawing of various pollutant control devices.

Control of specific pollutants : Control technologies for removal of SO₂, NO_x, VOC.

Control technologies for motor vehicles.

Maximum Registered Students

40

Prerequisites

ES 635, ES 305 or equivalent

Physics of aerosols: size and size distributions, mechanics of motion, agglomeration, diffusion, electrical effects and light scattering. Applications to sampling, deposition, and visibility. Particle formation and growth dynamics, aerosol reactor design engineering, and applications to environmental aerosols, catalysis, combustion, instrumentation, pharmaceuticals and powder production.

Maximum Registered Students

40

Prerequisites

ES 635, ES 305 or equivalent

Introduction to processes and materials, Phenomena governing process operation; driving forces, concentration polarization, hydrodynamics, sealing, fouling, Module configurations, Applications.

Reverse Osmosis fundamentals, process design and operation: municipal and industrial applications. Desalination of sea water, pure/ultrapure water production. Fouling and pretreatment, CAD for RO design.

Electrodialysis, Definition of process operation conditions from first principles. Water and industrial wastewater applications with reference to recent case studies.

Nanofiltration and ultrafiltration applications. NF for surface water treatment. UF in ultrapure and potable water production and in membrane bioreactors.

Dead-end cartridge filtration applications in potable and pure water treatment. Choice of media: filtration mechanism, filter media structure.

Maximum Registered Students

15

Prerequisites

None

Definition of soil and soil properties; Nature and arrangement of soil solids; Measurement of physical properties of the solid phase; Liquid phase characteristics and measurements: potential; capillarity; hysteresis; Prediction of soil moisture characteristics; Composition and properties of the air phase.

Fundamentals of unsaturated fluid flow; hydraulic conductivity measurement and prediction; Infiltration of water; Movement of non-aqueous fluids in soils; Two-phase transport properties; Richard's equation; Immiscible displacement.

Chemical composition of soils; Soil minerals—structure and surface functional groups; Mineral solubility and weathering; Surface chemistry and electric double layer; Composition and chemistry of soil organic matter; Inorganic and organic contaminant sorption processes.

Prerequisites

None

ES 680 GIS FOR ENVIRONMENTAL PLANNING AND MANAGEMENT 1 0 4 6

(Course credit structure is now modified to 1-0-4-6, from 2-1-0-6)

Introduction to GIS, Data input, verification, storage and output, Data structures in GIS, Data analysis and spatial modeling, DEMS, DTMS, Surfaces, TINS and Networks in GIS.

Introduction to remote sensing particularly for getting Input data from remote sensing.

Introduction to GIS software and hardware. Laboratory sessions with hands on practice on GIS software say ArcGIS.

Case studies on various applications of GIS for environmental planning and management.

Maximum Registered Students

15

Prerequisites

Strong background in mathematics is essential and programming is desirable (with permission of the instructor).

General considerations for source of drinking water; Economic sizing of pumping mains; Considerations for layout of treatment plant; Water treatment plant design, Design of water distribution network and wastewater collection system using EPANET AND LOOP program.

Design of Screens; Grit chamber; Aerated grit chamber; Communitor; Sizing of flow equalisation tank; Design of primary sedimentation tank.

Activated sludge process and its modifications; Trickling filter design along with hydraulic considerations; Rotating biological contactor; Aerated lagoons; Waste stabilisation ponds.

Anaerobic treatment Process; Design of upflow anaerobic sludge blanket reactor; Design of anaerobic sludge digester; Design of sludge drying beds.

Maximum Registered Students

20

Prerequisites

ES 637: Municipal Water & Wastewater Systems

1.Demonstration and evaluation of Scientific Reports, Note Taking Techniques
2.Discussion and Debates after Listening, Podcasts and Webcasts
3.Two pass approach to reading papers, Summary writing, literature survey and organization, Software Aids
4.Report Writing, Document Processing Software
5.Ethics and Plagiarism: practice and discussion.
6.Writing and Talking about workplace relationships, Gender Issues, Stereotypes, Biases, Labeling
7.Discussion on Contextual Viewpoint, Non-verbal Communication, Analysis of Mannerisms during interactions and presentations.
8.Evaluation of Presentations, Short and Long Talks, Timing, Visual Aids, Presentation Software
